

Developing renewable, clean energy in Perú.

about

We are a peruvian company formed by professionals experienced in the research, consultancy and project development of **Renewable Energies, Distributed Generation, Microgrid, Climate Change, and Energy Efficiency**, among other relatable themes.

We focus primarily in contributing to sustainable development, generating benefits to our clients with financial, technological and environmental solutions.

From conceptualizing to executing and operating, every project is rooted on a commitment to create a sustainable environment. Our team designs sustainable solutions based on environmental responsibility and maintaining long-lasting relationships with our clients, contributing to their corporate values and image.

work

Project Development

Land research and contract for RER projects in Peru. Permits, basic engineering and interconnections.

Business Strategy

Assistance in business model for renewable energies, project norms, auctions and market research.

Meteorological Analysis and Information

Research in climate change, El Nino and La Nina phenomenon. Analysis and forecast for renewable generators operations.

Project Equipment and Usage

Implementation for projects under development. Sensors and machinery acquisition. Towers installation, configuration of measurement equipments, RD processment, simulations and power calculations. Monitoring and maintenance of data and infrastructure of project development.

Project Management

PPAs, contracts, financial model. Environmental attributes, Flexible Structures.

Energy Efficiency

Savings for energetically costs, energy auditing, analysis, proposal and implementation of improvements in installations. Orientation to reduce consumption of electrical energy.

experience

Enerclim has 10 years of experience in developing major renewable energy projects in Peru. Our team has been part of the execution of Parque Eolico Talara 30MW and Parque Eolico Cupisnique 80MW.

Juan Coronado Lara, Emerclim's CEO and peruvian expert in renewable energies, has been in charge of the development and implementation of the first Wind Farms in Peru. Founder and Vicepresident of APEGER, peruvian association of renewable energies. President of SPR, peruvian society of renewable energies in 2008 and 2019.
